You hear a man talking about his job. Listen and decide what his job is.

I just love to see things grow and develop into a beautiful object. By the time they are finished, I think my products have a personality of their own. It may not be the kind of personality everybody likes, but if a few people see them as things of beauty, then that's enough for me. If I use good quality materials, you know, a good rosewood or something like that, and have the right tools to do the job, then I never have a problem with the service I provide my customers.
